## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sexton (U.S. patent 3,877,885).

Regarding claims 1-2, Sexton teaches a conductor wire that includes an alloy of aluminum, magnesium and silicon with a purity of aluminum greater than 90 %, and copper cladding therearound as claimed (col. 4, lines 18-33 and lines 51-53).

Sexton does not specifically teach a copper cladding rate as claimed. However, Sexton does teach that the sizes or the thickness of the copper-cladding material could be selected relative to the total volume of the wire.

Therefore, it would have been obvious to one skilled in the art to provide any rate for the copper cladding of the Sexton wire such as a rate of 25-40% of the volume of the wire depending on the applications for preventing cladding effects and wire breaks.

Further, Sexton does not teach that the electrical conductor wire is used as a voice coil for a loudspeaker. However, providing an electrical conductor wire to be used as a voice coil in a loudspeaker is known in the art.

Therefore, it would have been obvious to one skilled in the art to provide the electrical conductor wire of Sexton to be used as a voice coil for a loudspeaker for greater application.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kitazawa et al. (U.S. patent 6,178,623) teaches a composite lightweight copper plated aluminum wire.
